

#### **EMC TEST REPORT**

# FCC 47 CFR Part 15B Industry Canada RSS-Gen

#### **Electromagnetic compatibility - Unintentional radiators**

Testing Laboratory .....: Eurofins Product Service GmbH

Address .....: Storkower Str. 38c

15526 Reichenwalde

Germany

Accreditation .....:

A2LA Accredited Testing Laboratory, Certificate No.: 1983.01

FCC Filed Test Laboratory, Reg.-No.: 96970

IC OATS Filing assigned code: 3470A

Applicant's name .....: Sonetics Corporation

Address .....: 7340 SW Durham Road

OR 97224 Portland

USA

Test specification:

Standard.....: 47 CFR Part 15 Subpart B

RSS-Gen, Issue 3, 2010-12

ANSI C63.4:2009

**Equipment under test (EUT):** 

Product description Communication Headsets

Model No. APX379

Additional Models none

Hardware version APX379 Rev A (See Additional Information)

Firmware / Software version Revision A (See Additional Information)

FCC-ID: V9N950325200V1 IC: 7895A-95032520

Test result Passed

| Possi | ble  | test | case | verdi | cts: |

- not applicable to test object ...... N/A

- test object does meet the requirement...... P (Pass)

- test object does not meet the requirement..... F (Fail)

#### Testing:

Compiled by .....: Jens Marquardt

Tested by (+ signature).....: Jens Marquardt

Approved by (+ signature) .....: Marcus Klein

Date of issue ...... 2014-12-19

Total number of pages .....: 30

#### General remarks:

The test results presented in this report relate only to the object tested.

The results contained in this report reflect the results for this particular model and serial number. It is the responsibility of the manufacturer to ensure that all production models meet the intent of the requirements detailed within this report.

This report shall not be reproduced, except in full, without the written approval of the Issuing testing laboratory.

#### 1.8 Sample emission level calculation

The following is a description of terms and a sample calculation, as appears in the radiated emissions data table. The numbers used in the calculation are for example only. There is no direct correlation to the specific data taken for the product described in this document:

#### Reading:

This is the reading obtained on the spectrum analyzer in dBµV. Any external preamplifiers used are taken into account through internal analyzer settings.

#### A.F.:

This is the antenna factor for the receiving antenna. It is a conversion factor, which converts electric fields strengths to voltages, which can be measured directly on the spectrum analyzer. It is treated as a loss in dB. Cable losses have been included with the A.F. to simplify the calculations. The antenna factor is used in calculations as follows:

Reading on Analyzer ( $dB\mu V$ ) + A.F. (dB) = Net field strength ( $dB\mu V/m$ )

Net:

This is the net field strength measurement (as shown above).

Limit:

This is the FCC Class B radiated emission limit (in units of  $dB\mu V/m$ ). The FCC limits are given in units of  $\mu V/m$ . The following formula is used to convert the units of  $\mu V/m$  to  $dB\mu V/m$ :

Limit  $(dB\mu V/m) = 20*log (\mu V/m)$ 

#### Margin:

This is the margin of compliance below the FCC limit. The units are given in dB. A negative margin indicates the emission was below the limit. A positive margin indicates that the emission exceeds the limit.

#### Example only:

Reading + AF = Net Reading : Net reading - FCC limit = Margin 21.5 dB $\mu$ V + 26 dB = 47.5 dB $\mu$ V/m : 47.5 dB $\mu$ V/m - 57.0 dB $\mu$ V/m = -9.5 dB

#### **Test Procedure:**

The test site is in accordance with ANSI C63-4:2009 requirements and is listed by FCC. The measurement procedure is as follows:

- 1) The EUT was placed on a 0.8 m non conductive table at a 3 m distance from the receive antenna (ANSI C63.4: 2009 item 6.2)
- 2) The antenna output was connected to the measurement receiver
- 3) A biconical antenna was used for the frequency range 30 200 MHz, a logarithmic periodical antenna was used for the frequency range from 200 1000 MHz. Above one 1 GHz a Double Ridged Broadband Horn antenna was used. The antenna was placed on an adjustable height antenna mast
- 4) Emissions were maximized at each frequency by rotating the EUT and adjusting the receive antenna height and polarization. The maximum values were recorded.

Project number: G0M-1408-4062

Manufacturer: Sonetics Corporation
EUT Name: Communication Headsets

Model: APX379

Test Site: Eurofins Product Service GmbH

Operator: Mr. Marquardt

#### **Test Procedure:**

- 1) The EUT was placed on a non conductive table 0.8 m above the reference ground plane and 0.4 m away from the vertical conducting plane (ANSI C63.4: 2009 item 7.3.1)
- 2) The power cord that is normally supplied or recommended by the manufacturer was connected to the LISN.
- 3) The distance between the outer edge of the EUT and the LISN shall be set to 0.8 m. A longer power cord shall be bundled to this length (bundling shall not exceed 40 cm in length).
- 4) The LISN measurement port was connected to a measurement receiver
- 5) I/O cables were bundled not longer than 0.4 m
- 6) Measurement was performed in the frequency range 0.15 30MHz on each current-carrying conductor
